Accessories

POWER

CARD

BRONZE

Upgrade for your sports gear

Functional, comfortable, and versatile: these qualities define all our products in the Carbon line. Our high-quality sportswear and accessories provide the perfect upgrade for your sports gear. With Carbon, you don't just participate—you win!

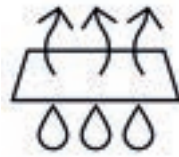

Discover Titanium next

Focused on all sports

After your boxing workout, how about a game of padel? The contrast could hardly be greater, but you can effortlessly keep your outfit on. The word versatility is inextricably linked with our Titanium line. The line is designed for all sports and crafted to perform optimally in any weather condition. Let's go!

TECHNICAL ICONS

All our products are of high technical quality. We use the latest functionalities and continuously innovate. This way, we raise the bar even higher.

Moisture-wicking

A moisture-wicking fabric can transport moisture (such as sweat) away from the skin to the outer layer of the fabric, where it can evaporate quickly. This keeps the skin dry and helps regulate body temperature, which is very important for your sports activity.

4-way stretch

The 4-way stretch fabric moves in two directions, meaning it stretches both horizontally and vertically. This type of fabric offers maximum flexibility and freedom of movement, allowing you to perform your sports activity optimally.

Seamless

A fabric made without the usual seams that arise from sewing different pieces of fabric together. Instead, the fabric is produced in one piece or with minimal seams, resulting in a smooth, seamless finish. This provides more comfort, flexibility, durability, and a sleek appearance.

Windproof

Windproof fabrics prevent wind from blowing through the fabric, retaining warmth inside and protecting the wearer from the effects of wind. By using advanced materials and technologies, these fabrics offer protection against the wind without sacrificing comfort and breathability.

Waterproof

Waterproof fabrics protect you in wet weather conditions and are often used in sportswear. This means the fabric resists rain or other forms of water without allowing moisture to seep through.

Warming

This clothing is designed to keep you warm during your workout. The fabric breathes well, is insulating, lightweight, and optimally regulates moisture. This enhances your sports performance in cold conditions.

Quick dry

This fabric is designed to quickly wick away moisture and dry within a short time. This property makes it ideal for use in sportswear. Additionally, this fabric is very lightweight, wrinkle-resistant, breathable, and durable.

Lightweight

A lightweight fabric weighs relatively little, making the clothing comfortable to wear. The fabric is breathable, flexible, and quick-drying.

Cooling

This clothing is designed to keep you cool during your workout. This means the fabric breathes well, regulates moisture, dries quickly, controls sun exposure, and uses other innovative cooling technologies. This enhances your sports performance in warm weather or during indoor activities.

Ultra soft

This fabric feels exceptionally soft against the skin. The fibers are very fine, and the fabric is insulating and very flexible. Very comfortable for the athlete.

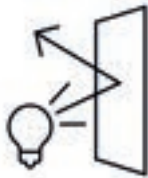

Breathable

A breathable fabric can wick moisture away from the skin to the surface of the garment. This allows the moisture to evaporate, keeping your body dry and comfortable during exercise. Additionally, a breathable fabric helps dissipate excess heat, providing cooling.

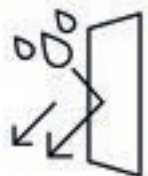

Lined

The lining in our clothing provides extra comfort, warmth, and structure. This is especially beneficial during winter. A good lining also ensures that the garment lasts longer and is easier to put on and take off.

Reflective detail

Reflective prints and trims are used in clothing to increase the visibility of the athlete. They reflect light back to its source, making the athlete more visible. In dark conditions, this contributes to the athlete's safety.

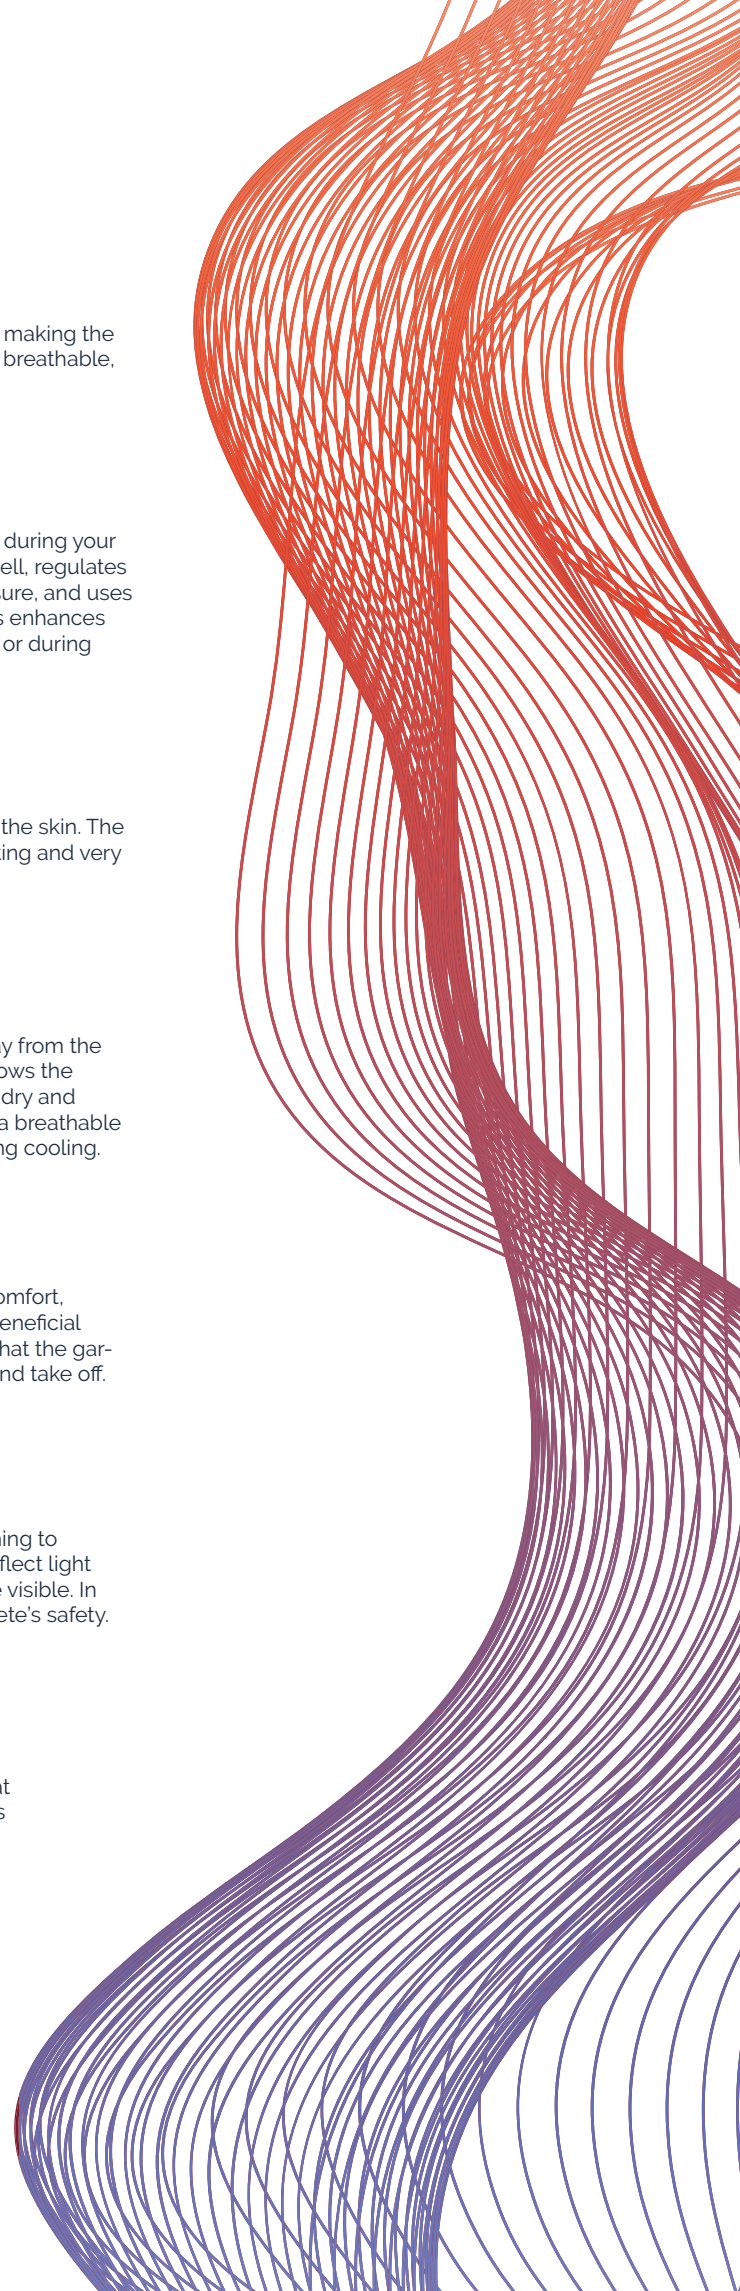

Water repellent

Water-repellent material absorbs water, forming droplets on the fabric's surface that roll off, keeping the fabric dry. This provides protection against rain and moisture.

Odor control

By using advanced fabrics and technologies in the clothing, your body odor is effectively controlled. Even when you sweat, your clothes will continue to smell fresh.

*Ultimately aims for JDH to become the all-sport brand
great if we could achieve that*

– Jeroen van Moergestel, Owner of JDH

'AT JDH, QUALITY COMES BEFORE APPEARANCE'

Interview with Jeroen van Moergestel - owner of JDH Europe

NOOR Sportswear recently launched a second brand after The Indian Maharadja: with JDH, the Brabant-based sports company is fully committed to the development of high-quality products. Owner Jeroen van Moergestel: "Quality comes before appearance."

JDH has its origins in the world of hockey, but has since developed products for sports such as football and padel. Van Moergestel wants to add more sports in the short term and ultimately aims for JDH to become the all-sports brand of the Netherlands. "It would be great if we could achieve that."

Quality above appearance

Van Moergestel is clear: "At JDH, quality comes before appearance. The clothing must feel good: light and flexible, allowing for great freedom of movement. This should contribute to better sports performance, both for top athletes and recreational athletes. Because we and our products are for all athletes. From professional runners to recreational padel players. Of course, we want you to look good too, but first and foremost, it's about the quality of our products."

Clothing suitable for different weather conditions

An important part of JDH's offering is the clothing. They are designed to be used for all sports but also in various weather conditions. "For example, we have clothing that is cooling, warming, and/or moisture-wicking. In the heat, cold, and rain, we offer sportswear that is most appropriate for that moment. In this area, we also try to be distinctive and work innovatively."

TOP Oss

While The Indian Maharadja focuses mainly on hockey, tennis, and soon golf, the ambitious entrepreneur wants to dedicate JDH to all sports. "With this new brand, we want to establish our name in, for example, cyclo-cross, running, and football. We are already the official clothing supplier of TOP Oss. So even professional football has now cautiously become acquainted with JDH."

Sports equipment

In addition to clothing, JDH is also a supplier of other sports equipment. "We offer padel rackets, hockey sticks, and various types of protective gear, but that's certainly not the end. Sports equipment in all shapes and sizes will complete our assortment. Everything of the highest quality."

FIVE QUESTIONS WITH NICOLA COLEMAN

Nicola Coleman is the creative mind behind this first JDH collection. After working in the sports world with renowned companies such as Puma, Umbro, and Red Bull, she is now with JDH. We asked the experienced designer five pressing questions.

You've been active in the sports industry for quite some time. Can you summarize your professional career in a few sentences?

'In my youth, I worked in various sports stores. I quickly discovered that I enjoyed discussing the technical details of clothing with customers. After studying Fashion Design—I interned at Puma during that time—I started working at Umbro HQ. There, I worked as a designer exclusively on kits for football clubs in the Premier League, Bundesliga, and Eredivisie. Then I moved on to work at Castore and Red Bull HQ in Austria before joining JDH last year (2023, ed).'

What makes working in the sports industry so fascinating?

'The sports industry is constantly evolving. The potential is enormous, and there are still many development opportunities. I enjoy hearing from athletes about their needs and strive to design clothing that enhances their performance. Every day is a learning day for me, and that makes the work fun and challenging.'

How would you describe the style of JDH, and what sets it apart from other leading sports brands?

'JDH pushes boundaries within the hockey world by bringing a youthful, wearable collection to the market. Additionally, we take a more technical approach to the all sports side of the brand. By designing functional and technically advanced clothing, we can cater to all sports.'

What innovations have you applied in designing this JDH collection?

'For JDH, the team sport collections feature lightweight, highly stretchable fabrics. This is to create maximum freedom of movement and breathability. The all sport-collections also use very lightweight fabrics. Innovations such as laser-cut holes and bonded seams are incorporated. This makes the clothing lighter and provides more freedom of movement.'

What inspired you in designing this collection?

'We want to challenge the traditional hockey world. At the same time, we aim to make our mark in the all sports world. I created a brand graphic that is subtly applied to the clothing. This runs like a common thread throughout the entire collection. In this way, we want to gradually move away from traditional hockey training clothing. All clothing should be able to be layered and transitional, suitable for different seasons. This together has been a major source of inspiration for this collection.'

*'We Want to Challenge the Traditional Hockey World'
– Nicola Coleman, JDH Designer*

*'JDH Has Undoubtedly Made Me a Player'
– Jasper Brinkman, player of Bloemendaal
the Dutch national team*

JASPER BRINKMAN ON JDH

Jasper Brinkman (27), player of Bloemendaal and former player of the Dutch national team, has been affiliated with JDH for four years. With “our” stick in hand, the strong defender has developed into a fully-fledged international player. ‘JDH has undoubtedly made me a better hockey player.’

Why JDH?

‘Four years ago, the brand already had an excellent reputation. JDH was really known for the outstanding quality of their sticks. Additionally, I was lucky enough to play with Jamie (Dwyer, founder of JDH and five-time World Player of the Year) at Bloemendaal for a year. That was, of course, a great honor.’

Which stick do you play with?

‘I play with the Concave. I love the curve of this stick. It enhances my passing and air dribbles. Also, for the drag flick during penalty corners, one of my main weapons, I gain a lot of advantage from this curve. I have more control, and the ball speed increases. The design is really made for the penalty corner specialist.’

Have you become a better player since you started playing with a JDH-stick?

‘Although I have also become physically stronger and gained more experience over the past few years, I am absolutely convinced that JDH has played an important role in my development. Since I started playing with this stick, I have had more control over the ball, and that has undoubtedly made me a better hockey player.’

Besides the hardware, you also use JDH clothing. Do you wear it for other sports as well?

‘Due to my busy hockey schedule, I don’t have much time to practice other sports. As part of our program, I spend a lot of time in the gym. In my free time or during vacations, I often go for a run. Then the comfortable JDH clothing comes in handy. I especially wear the shorts and t-shirts regularly.’
